MEMORANDUM

Clallam County Department of Community Development

TO: Tobi Maggi, Senior Planner
FROM: Joel Freudenthal, Habitat Specialist
SUBJ: Rayonier Demolition
DATE: April 7, 1997

I have read both the City of Port Angeles' letter to Rayonier and their response. I still find the stormwater section inadequate. The existing NPDES permit is for pulp effluent, not for runoff from demolition debris, and subsequently, stormwater runoff from potentially contaminated sediments after the structures have been removed from the site. Will the demolition debris (such as creosote pilings) be covered to prevent stormwater from being generated by the debris? How will the barges be covered, and any accumulation of water in the barges dealt with?

Secondly, I still do not see any reference to the water line or the water right and what, if any, are the plans for demolition of that line within the City?
